Technical Information **Deltabar PMD75B**

Differential pressure, level and flow measurement in liquids or gases

Digital differential pressure transmitter with metal process membrane

Applications

- Pressure measuring ranges: up to 250 bar (3750 psi) (gauge pressure and absolute pressure) and 40 bar (600 psi) (differential pressure)
- Static pressure: up to 420 bar (6300 psi)
- Accuracy: up to ±0.035%

Advantages

The new Deltabar generation introduces a robust pressure transmitter that combines numerous benefits: Easiest local or remote operation, allows condition-based maintenance and offers smart safety in processes. The firmware is designed to ensure extremely easy handling. Intuitive and clear wizard navigation guides the user through the commissioning and verification of the device. The Bluetooth connectivity provides safe and remote operation. The large display with backlight guarantees excellent readability. The Heartbeat Technology software package offers an ondemand verification and monitoring function to detect undesired anomalies. including plugged impulse lines or changes in the supply voltage, for example.

About this document

Symbols

Safety symbols

A DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

ACAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

Electrical symbols

Ground connection: \pm

Terminal for connection to the grounding system.

Symbols for certain types of information

Permitted: 🖌

Procedures, processes or actions that are permitted.

Forbidden: 🔀

Procedures, processes or actions that are forbidden.

Safety instructions: $\underline{\mathbf{\Lambda}} \rightarrow \mathbf{\square}$

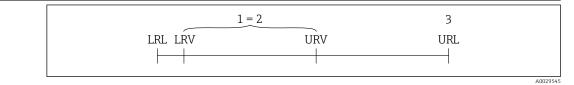

Observe the safety instructions contained in the associated Operating Instructions.

List of abbreviations

- 1 OPL: The OPL (overpressure limit = sensor overload limit) for the device depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Pay attention to the pressure/temperature dependency.
- 2 MWP: The MWP (maximum working pressure) for the sensors depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Pay attention to the pressure/temperature dependency. The MWP may be applied at the device for an unlimited period of time. The MWP can be found on the nameplate.
- 3 The maximum sensor measuring range corresponds to the span between the LRL and URL. This sensor measuring range is equivalent to the maximum calibratable/adjustable span.
- 4 The calibrated/adjusted span corresponds to the span between the LRV and URV. Factory setting: 0 to URL. Other calibrated spans can be ordered as customized spans.
- p Pressure
- LRL Lower range limit
- URL Upper range limit
- LRV Lower range value
- URV Upper range value
- TD Turn down. Example see the following section.

Turn down calculation

- 1 Calibrated/adjusted span
- 2 Zero point-based span
- 3 Upper range limit

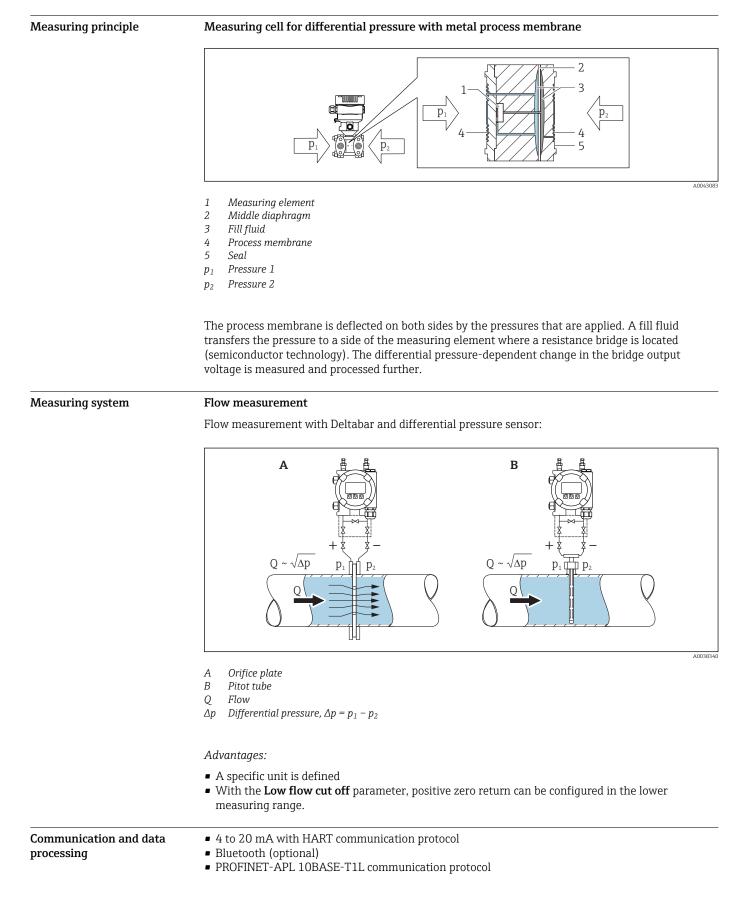

Example:

- Sensor: 16 bar (240 psi)
- Upper range limit (URL) = 16 bar (240 psi)
- Calibrated/adjusted span: 0 to 8 bar (0 to 120 psi)
- Lower range value (LRV) = 0 bar (0 psi)
- Upper range value (URV) = 8 bar (120 psi)

In this example, the TD is 2:1. This span is based on the zero point.

Function and system design

Dependability for devices with HART, Bluetooth, PROFINET APL

IT security

Endress+Hauser can only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings. IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

Device-specific IT security

The device offers specific functions to support protective measures by the operator. These functions can be configured by the user and guarantee greater in-operation safety if used correctly. An overview of the most important functions is provided in the following section:

- Write protection via hardware write protection switch
- Access code to change the user role (applies for operation via display, Bluetooth or FieldCare, DeviceCare, AMS, PDM)

Function/interface	Factory setting	Recommendation
Access code (also applies for Web server login or FieldCare connection)	Not enabled (0000)	Assign a customized access code during commissioning.
Web server	Enabled	On an individual basis following risk assessment.
Service interface (CDI)	-	On an individual basis following risk assessment.
Write protection via hardware write protection switch	Not enabled	On an individual basis following risk assessment.

Protecting access via a password

Different passwords are available to protect write access to the parameters of the device.

Protect write access to the parameters of the device via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare). Access authorization is clearly regulated through the use of a user-specific access code.

User-specific access code

Write access to the parameters of the device via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare) can be protected using the editable, user-specific access code.

General notes on the use of passwords

- The access code and network key that were used when the device was delivered from the factory must be changed during commissioning
- When defining and managing the access code, comply with the general rules for the generation of a secure password
- The user is responsible for managing the access code and for using the code with due care

Access via Web server

The device can be operated and configured via a Web browser with the integrated Web server. For device versions with the EtherNet/IP and PROFINET communication protocols, the connection can also be established via the terminal connection for signal transmission with EtherNet/IP or PROFINET.

The Web server is enabled when the device is delivered. The Web server can be disabled via the **Web server functionality** parameter if necessary (e.g. after commissioning).

The device and status information can be hidden on the login page. This prevents unauthorized access to the information.

Detailed information on the device parameters: "Description of Device Parameters" document

Input

Measured variable	Measured process variables
	 Differential pressure Absolute pressure Gauge pressure
Measuring range	Depending on the device configuration, the maximum working pressure (MWP) and the overpressure limit (OPL) can deviate from the values in the tables.

Standard: PN 160 / 16 MPa / 2400 psi

1) If CRN approval is selected, the following limited MWP values apply: without side vent valves: 262 bar (3 800 psi); with side vent: 179 bar (2 596.2 psi); with copper seals: 124 bar (1798.5 psi)

2) Available only with blind flange on LP side.

3) The 250 bar sensor can be used over the entire measuring range with up to 100,000 load changes without specification restrictions.

Minimum system pressure

- Minimum system pressure at reference operating conditions for silicone oil: 25 mbar (0.0375 psi)
- ^{abs}
 Minimum system pressure at 85 °C (185 °F) for silicone oil: to 250 mbar (4 psi) _{abs}

Optionally available as a gauge or absolute pressure sensor (all measuring cells)

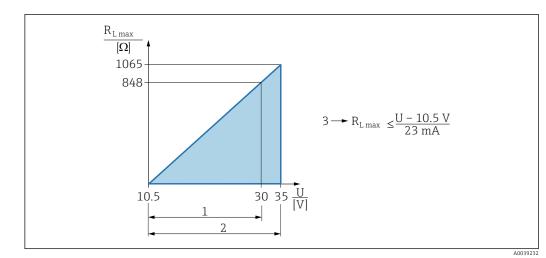

- Minimum system pressure at reference operating conditions for silicone oil: 10 mbar (0.15 psi) abs
- Minimum system pressure at 85 °C (185 °F) for silicone oil: to 10 mbar (0.15 psi) abs

Output

Output signal	Current output		
	4 to 20 mA with superimposed digital communication protocol HART, 2-wire		
	PROFINET-APL 10BASE-T1L, 2-wire 10 Mbit		
	 The current output offers a choice of three different operating modes: 4.0 to 20.5 mA NAMUR NE 43: 3.8 to 20.5 mA (factory setting) US mode: 3.9 to 20.8 mA 		
Signal on alarm	 Signal on alarm in accordance with NAMUR recommendation NE 43. 4 to 20 mA HART: Options: Max alarm: can be set from 21.5 to 23 mA Min. alarm: < 3.6 mA (factory setting) Ethernet-APL: According to "Application Layer protocol for decentralized periphery", Version 2.3 		

Load

4 to 20 mA HART

- 1 Power supply 10.5 to 30 VDC Ex i
- 2 Power supply 10.5 to 35 VDC, for other types of protection and non-certified device versions
- 3 R_{Lmax} maximum load resistance
- U Supply voltage

Operation via handheld terminal or PC with operating program: take minimum communication resistance of $250 \,\Omega$ into consideration.

Damping	 A damping affects all outputs (output signal, display). Damping can be enabled as follows: Via the onsite display, Bluetooth, handheld terminal or PC with operating program, continuous from 0 to 999 seconds Factory setting: 1 s
Ex connection data	See the separate technical documentation (Safety Instructions (XA)) on www.endress.com/download.
Linearization	The device's linearization function allows the user to convert the measured value to any units of height or volume. User-defined linearization tables of up to 32 value pairs can be entered if necessary.
Flow measurement with Deltabar and differential pressure sensor	Low flow cut off parameter: When the Low flow cut off parameter is activated, small flows which can lead to large fluctuations in the measured value are suppressed.

The **Low flow cut off** parameter is set to 5% by default when the **Output current transfer function** parameter is set to **Square root** option.

Protocol-specific data

HART

- Manufacturer ID: 17 (0x11{hex})
 Device trace ID: 0x1121
- Device type ID: 0x1131Device revision: 1
- Device revision: 1
 HART specification: 7
- DD revision: 1
- Device description files (DTM, DD) information and files at:
 - www.endress.com
 - www.fieldcommgroup.org
- HART load: min. 250 Ohm

HART device variables (preset at the factory)

The following measured values are assigned to the device variables at the factory:

Device variable	Measured value
Primary variable (PV) ¹⁾	Pressure ²⁾
Secondary variable (SV)	Sensor temperature
Tertiary variable (TV)	Electronic temperature
Quaternary variable (QV)	Sensor pressure ³⁾

1) The PV is always applied to the current output.

- 2) The pressure is the calculated signal after damping and position adjustment.
- 3) The sensor pressure is the raw sensor signal before damping and position adjustment.

Choice of HART device variables

- **Pressure** option (after position correction and damping)
- Scaled variable
- Sensor temperature
- Sensor pressure
- Sensor Pressure is the raw signal from sensor before damping and position adjustment.
- Electronics temperature
- Terminal current
- The terminal current is the read-back current on terminal block.
- Terminal voltage 1
 Visibility depends on order options or device settings
- Noise of pressure signal option and Median of pressure signal option Visible if Heartbeat Technology ordered
- Percent of range
- Loop current The loop current is the output current set by the applied pressure.

Supported functions

- Burst mode
- Additional transmitter status
- Device locking

PROFINET

Protocol	Application layer protocol for decentral device periphery and distributed automation, Version 2.3
Communication type	10 Mbit/s
Conformance Class	Conformance Class B
Netload Class	Netload Class II
Baud rates	Automatic 10 Mbit/s with full-duplex detection

Cycle times	From 32 ms
Polarity	Auto-polarity for automatic correction of crossed TxD and RxD pairs
Media Redundancy Protocol (MRP)	Yes
System redundancy support	System redundancy S2 (2 AR with 1 NAP)
Device profile Application interface identifier 0xF600 Generic device	
Manufacturer ID	0x11
Device type ID	
Device description files (GSD, FDI, DTM, DD)	Information and files under: ■ www.endress.com On the product page for the device: Documents/Software → Device drivers ■ www.profibus.org
Supported connections	 2 x AR (IO Controller AR) 1 x AR (IO-Supervisor Device AR connection allowed) 1 x Input CR (Communication Relation) 1 x Output CR (Communication Relation) 1 x Alarm CR (Communication Relation)
Configuration options for device	 Manufacturer-specific software (FieldCare, DeviceCare) Web browser Device master file (GSD), can be read out via the integrated Web server of the device
Configuration of the device name	 DCP protocol Process Device Manager (PDM) Integrated Web server
Supported functions	 Identification & maintenance Simple device identification via: Control system Nameplate Measured value status The process variables are communicated with a measured value status Blinking feature via the local display for simple device identification and assignment Device operation via operating tools (e.g. FieldCare, DeviceCare, SIMATIC PDM)
System integration	 For information on system integration, see the Operating Instructions Cyclic data transmission Overview and description of the modules Status coding Startup configuration Factory setting

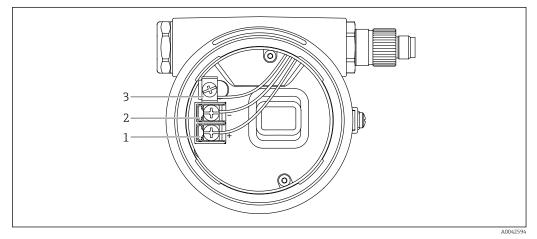

Wireless HART data

- Minimum starting voltage: 10.5 V
 Start-up current: 3.6 mA
 Start-up time: <5 s
 Minimum operating voltage: 10.5 V
 Multidrop current: 4 mA

Power supply

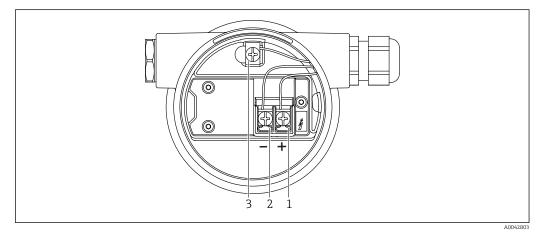

Single compartment housing

• 1 Connection terminals and ground terminal in the connection compartment

- Positive terminal 1
- 2 Negative terminal
- 3 Internal ground terminal

Dual compartment housing

₽ 2 Connection terminals and ground terminal in the connection compartment

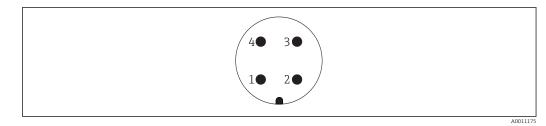

- 1 Positive terminal
- Negative terminal 2 3
 - Internal ground terminal

Available device plugs

In the case of devices with a plug, it is not necessary to open the housing for connection 1 purposes.

Use the enclosed seals to prevent the penetration of moisture into the device.

Devices with M12 plug

4	Not assigned

Endress+Hauser offers the following accessories for devices with an M12 plug:

Plug-in jack M 12x1, straight

- Material:
 - Body: PBT; union nut: nickel-plated die-cast zinc; seal: NBR
- Degree of protection (fully locked): IP67
- Order number: 52006263

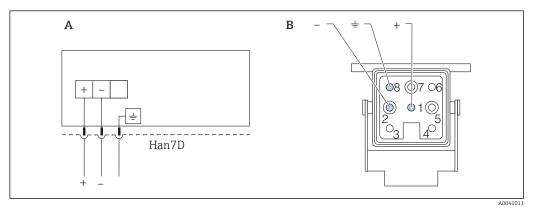

Plug-in jack M 12x1, elbowed (not for Ethernet-APL)

- Material:
- Body: PBT; union nut: nickel-plated die-cast zinc; seal: NBR
- Degree of protection (fully locked): IP67
- Order number: 71114212

Cable 4x0.34 mm² (20 AWG) with M12 plug-in jack, elbowed, screw plug, length 5 m (16 ft)

- Material: body: TPU; union nut: nickel-plated die-cast zinc; cable: PVC
- Degree of protection (fully locked): IP67/68
- Order number: 52010285
- Cable colors
 - 1 = BN = brown
 - 2 = WT = white
 - 3 = BU = blue
 - 4 = BK = black

Devices with a Harting plug Han7D

- A Electrical connection for devices with Harting plug Han7D
- *B* View of the plug-in connection on the device
- Brown
- \pm Green/yellow
- + Blue

Material: CuZn, gold-plated contacts of the plug-in jack and plug

Supply voltage	• Ex d, Ex e, non Ex: supply voltage: 10.5 to 35 V _{DC}
	 Ex i: supply voltage: 10.5 to 30 V_{DC} Ethernet-APL Power Class A (9.6 to 15 V_{DC} 540 mW)
	 Nominal current: 4 to 20 mA HART
	The power unit must be tested to ensure it meets safety requirements (e.g. PELV, SELV, Class 2).
	The field switch must be tested to ensure it meets safety requirements (e.g. PELV, SELV, Class 2).
	A suitable circuit breaker should be provided for the device in accordance with IEC/EN 61010.
Potential equalization	
	A00454
	1 Ground terminal for connecting the potential matching line
	If necessary, the potential matching line can be connected to the outer ground terminal of the transmitter before the device is connected.
	 For optimum electromagnetic compatibility: Keep the potential matching line as short as possible Maintain a cross-section of at least 2.5 mm² (14 AWG)
Terminals	 Supply voltage and internal ground terminal: 0.5 to 2.5 mm² (20 to 14 AWG) External ground terminal: 0.5 to 4 mm² (20 to 12 AWG)
Cable entries	
	A00454 1 Cable entry 2 Dummy plug
	The type of cable entry depends on the device version ordered.
	Always route connecting cables downwards so that moisture cannot penetrate the connection compartment.
	If necessary, create a drip loop or use a weather protection cover.
Cable specification	 The cable outer diameter depends on the cable entry used Cable outer diameter Plastic: Ø5 to 10 mm (0.2 to 0.38 in) Nickel-plated brass: Ø7 to 10.5 mm (0.28 to 0.41 in) Stainless steel: Ø7 to 12 mm (0.28 to 0.47 in)
Overvoltage protection	Devices without optional overvoltage protection
	Equipment from Endress+Hauser fulfills the requirements of the product standard IEC / DIN EN 61326-1 (Table 2 Industrial Environment).
	Depending on the type of port (DC power supply, input/output port) different testing levels according to IEC / DIN EN 61326-1 against transient overvoltages (Surge) are applied (IEC / DIN EN 61000-4-5 Surge): Test level on DC power ports and input / output ports is 1000 V line to earth

Devices with optional overvoltage protection

- Spark-over voltage: min. 400 V DC
- Tested according to IEC / DIN EN 60079-14 sub chapter 12.3 (IEC / DIN EN 60060-1 chapter 7)
 Nominal discharge current: 10 kA

Overvoltage category

Overvoltage category II

Response time	 HART: acyclic: min. 330 ms, typically 590 ms (depends on commands and number of preambles) HART: cyclic (burst): min. 160 ms, typically 350 ms (depends on commands and number of preambles) Cyclic: min. 32 ms 	
Reference operating conditions	 As per IEC 62828-2 Ambient temperature T_A = constant, in the range of +22 to +28 °C (+72 to +82 °F) Humidity φ = constant, in the range of: 5 to 80 % rF ± 5 % Ambient pressure p_A = constant, in the range of: 860 to 1060 mbar (12.47 to 15.37 psi) Position of the measuring cell: horizontal ±1° Input of LOW SENSOR TRIM and HIGH SENSOR TRIM for lower range value and upper range value Membrane material: AISI 316L (1.4435), Alloy C276, Monel Supply voltage: 24 V DC ±3 V DC Load with HART: 250 Ω Turn down (TD) = URL/ URV - LRV Zero based span 	
Total performance	The performance characteristics refer to the accuracy of the device. The factors that influence the accuracy can be divided into two groups Total performance of device Installation factors 	
	All of the performance characteristics meet the requirement of $\ge \pm 3$ sigma.	
	The total performance of the device comprises the reference accuracy and the ambient temperature effect and is calculated using the following formula:	
	Total performance = $\pm \sqrt{((E1)^2 + (E2)^2 + (E3)^2)}$	
	E1 = Reference accuracy	
	E2 = Ambient temperature effect	
	E3 = Static pressure effect	
	Calculation of E2:	
	Ambient temperature effect per ±28 °C (50 °F)	
	(Corresponds to a range of -3 to $+53$ °C (+27 to $+127$ °F))	
	$E2 = E2_{M} + E2_{E}$	
	$E2_{M} = Main temperature error$	
	$E2_E = Electronics error$	
	The values apply to process membranes made of 316L (1.4435)The values refer to the calibrated span.	

Performance characteristics

Calculation of the total performance with the Endress+Hauser Applicator

Detailed inaccuracies, e.g. for other temperature ranges, can be calculated with the Applicator "Sizing Pressure Performance".

Reference accuracy [E1]

The reference accuracy comprises the non-linearity according to the limit point method, pressure hysteresis and non-repeatability in accordance with [IEC62828-1 / IEC 61298-2]. Reference accuracy for standard up to TD 100:1, for platinum up to TD 5:1.

Response time T63 and T90

Dead time, time constant

Representation of dead time and time constant as per IEC62828-1:

Dynamic behavior, current output (HART electronics)

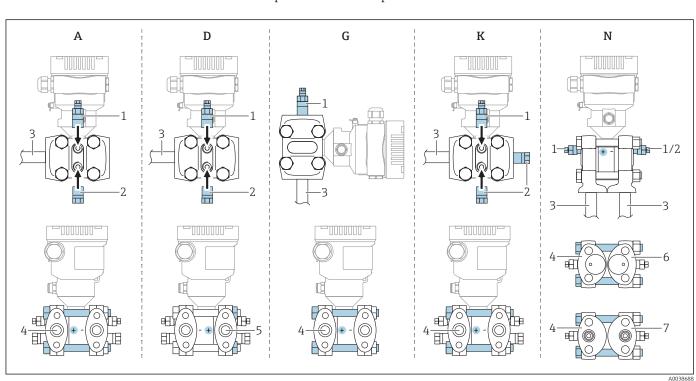

10 mbar (0.15 psi) and 30 mbar (0.45 psi) sensor:

- Dead time (t₁): maximum 50 ms
- Time constant T63 (t₂): maximum 450 ms
- Time constant T90 (t₃): maximum 1100 ms
- 100 mbar (1.5 psi) sensor:
- Dead time (t₁): maximum 50 ms
- Time constant T63 (t₂): maximum 120 ms
- Time constant T90 (t₃): maximum 200 ms

All other sensors:

- Dead time (t₁): maximum 50 ms
- Time constant T63 (t₂): maximum 85 ms
- Time constant T90 (t₃): maximum 200 ms

Warm-up time (according to ≤ 5 s IEC62828-4)

Installation

Orientation

The installation depends on how the impulse lines are connected.

3 A, D, G, K, N: order options

- A Horizontal impulse line, left side HP (screw head side), with side vent. Thread on one side and side thread for horizontal impulse line.
- D Horizontal impulse line, right side HP (nut side), with side vent. Thread on one side and side thread for horizontal impulse line.
- *G* Vertical impulse line, left or right side HP (screw head side), with vent. Thread on each side for vertical impulse line.
- *K* Universal side flange, left or right side HP (screw head side), with vent. Thread on each side and side thread for universal mounting.
- *N* Bottom process connection, left side HP (screw head side), vent. Thread on each side and side thread for mounting on existing manifolds.
- 1 Vent valve
- 2 Sealing plug
- 3 Impulse line
- 4 High-pressure (HP) side (screw head side)
- 5 High-pressure (HP) side (nut side)
- 6 Coplanar compatible, view from below
- 7 IEC upright, view from below

Sensor selection and arrangement

Flow measurement

Flow measurement in gases

Mount the device above the measuring point so that condensate can drain into the process pipe.

Flow measurement in vapors

- Mount the device below the measuring point
- Mount the condensate traps at the same height as the tapping points and at the same distance to the device
- Prior to commissioning, fill the impulse lines to the height of the condensate traps

Flow measurement in liquids

- Mount the device below the measuring point so that the impulse lines are always filled with liquid and gas bubbles can run back into the process pipe
- When measuring in media with solid parts, such as dirty liquids, installing separators and drain valves is useful for capturing and removing sediment

Level measurement

Level measurement in open vessels

- Mount the device below the lower measuring connection so that the impulse lines are always filled with liquid
- The low-pressure side is open to atmospheric pressure
- When measuring in media with solid parts, such as dirty liquids, installing separators and drain valves is useful for capturing and removing sediment

Level measurement in a closed vessel

- Mount the device below the lower measuring connection so that the impulse lines are always filled with liquid
- Always connect the low-pressure side above the maximum level
- When measuring in media with solid parts, such as dirty liquids, installing separators and drain valves is useful for capturing and removing sediment

Level measurement in a closed vessel with superimposed vapor

- Mount the device below the lower measuring connection so that the impulse lines are always filled with liquid
- Always connect the low-pressure side above the maximum level
- The condensate trap ensures constant pressure on the low-pressure side
- When measuring in media with solid parts, such as dirty liquids, installing separators and drain valves is useful for capturing and removing sediment

Pressure measurement

Pressure measurement with 160 bar (2 400 psi) and 250 bar (3 750 psi) measuring cell

Mount the device above the measuring point so that the condensate can drain into the process pipe

Differential pressure measurement

Differential pressure measurement in gases and vapors

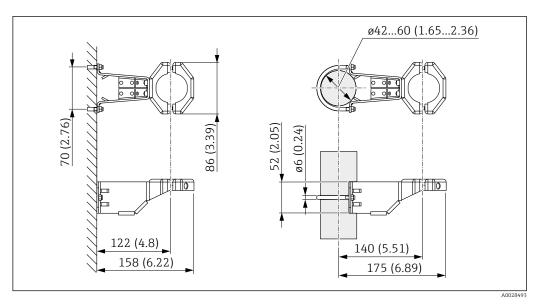

Mount the device above the measuring point so that condensate can drain into the process pipe.

Differential pressure measurement in liquids

Mount the device below the measuring point so that the impulse lines are always filled with liquid and gas bubbles can run back into the process pipe

Mounting bracket for separate housing

The separate housing can be mounted on walls or pipes (for pipes with a diameter of $1 \frac{14}{14}$ to $2^{"}$) using the mounting bracket.

Unit of measurement mm (in)

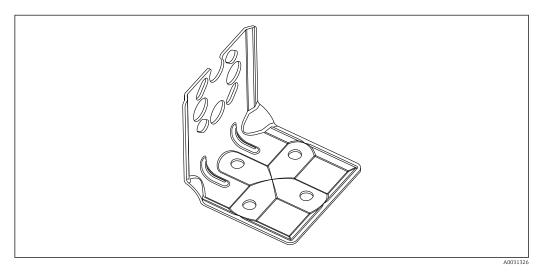

Ordering information:

Can be ordered as a separate accessory, part number 71102216

The mounting bracket is included in the delivery if you order the device with a separate housing.

Wall and pipe mounting

Endress+Hauser offers the following mounting bracket for installing the device on pipes or walls:

- If a valve manifold is used, its dimensions should also be taken into consideration
- Bracket for wall and pipe mounting including retaining bracket for pipe mounting and two nuts
- The material of the screws used to secure the device depends on the order code

For technical data (e.g. materials, dimensions or order numbers), see the accessory document SD01553P.

Special mounting instructions

Wall and pipe mounting with a manifold (optional)

If the device is mounted on a shutoff device (e.g. manifold or shutoff valve), then use the bracket provided for this purpose. This makes it easier to disassemble the device.

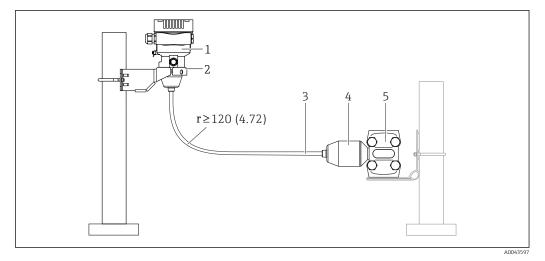

For technical data, see the SD01553P accessory document.

Sensor, remote (separate housing)

The device housing (including the electronic insert) is mounted at a distance from the measuring point.

- This version therefore facilitates trouble-free measurement:
- Under particularly difficult measuring conditions (at installation locations that are cramped or difficult to access)
- If the measuring point is exposed to vibrations
- Cable versions:
- PE: 2 m (6.6 ft), 5 m (16 ft) and 10 m (33 ft)
- FEP: 5 m (16 ft).

The sensor is delivered with the process connection and cable already mounted. The housing (including the electronic insert) and a mounting bracket are enclosed as separate units. The cable is provided with a socket at both ends. These sockets are simply connected to the housing (including the electronic insert) and the sensor.

- *1* Sensor, remote (including electronic insert)
- 2 Mounting bracket enclosed, suitable for wall or pipe mounting
- 3 Cable, both ends are fitted with a socket
- 4 Process connection adapter
- 5 Process connection with sensor

Ordering information:

- Remote sensor (including electronic insert) including the mounting bracket can be ordered via the Product Configurator
- The mounting bracket can also be ordered as a separate accessory, part number 71102216

Technical data for cables:

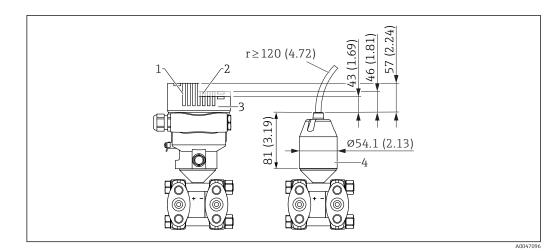

- Minimum bending radius: 120 mm (4.72 in)
- Cable extraction force: max. 450 N (101.16 lbf)
- Resistance to UV light

Use in hazardous area:

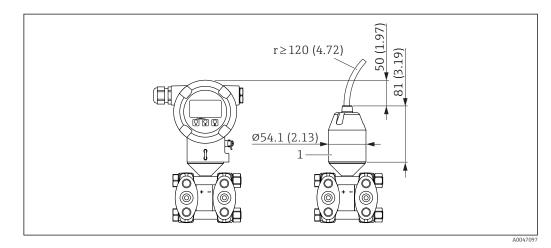

- Intrinsically safe installations (Ex ia/IS)
- FM/CSA IS for Div. 1 installation only

Reduction of installation height

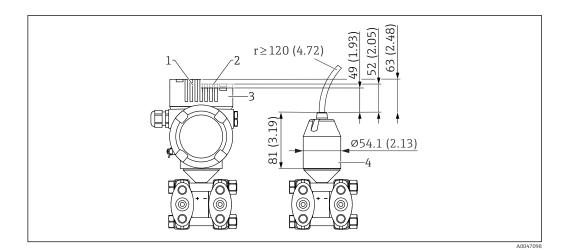

If this version is used, the installation height of the process connection is reduced compared to the dimensions of the standard version.

- 1 Device with display, cover with glass viewing window (devices for Ex d, dust Ex)
- 2 Device with display, cover with plastic viewing window
- 3 Device without display, cover without viewing window
- 4 Process connection adapter

1 Process connection adapter

- 1 Device with display, cover with glass viewing window (devices for Ex d, dust Ex)
- 2 Device with display, cover with plastic viewing window
- 3 Device without display, cover without viewing window
- 4 Process connection adapter

Environment

Ambient temperature range

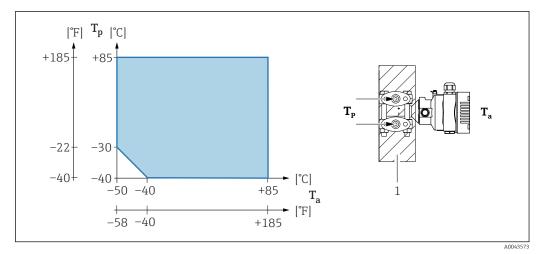

The following values apply up to a process temperature of +85 °C (+185 °F). At higher process temperatures, the permitted ambient temperature is reduced.

- Without LCD display:
 - Standard: -40 to +85 °C (-40 to +185 °F)
 - Optionally available: -50 to +85 °C (-58 to +185 °F) with restricted operating life and performance
 - Optionally available: -54 to +85 °C (-65 to +185 °F); below -50 °C (-58 °F): devices can be permanently damaged
- With LCD display: -40 to +85 °C (-40 to +185 °F) with limitations in optical properties, such as display speed and contrast. Can be used without limitations up to -20 to +60 °C (-4 to +140 °F)
- Separate housing: -20 to +60 °C (-4 to +140 °F)

Devices with inert oil: minimum process and ambient temperature -20 °C (-4 °F)

Ambient temperature T_a depending on the process temperature T_p

The process connection must be fully insulated for ambient temperatures below −40 °C (−40 °F).

1 Insulation material

Hazardous area

- For devices for use in hazardous areas, see the Safety Instructions, Installation Drawing or Control Drawing
- Devices that have the most common explosion protection certificates (e.g. ATEX/ IEC Ex, etc.) can be used in explosive atmospheres with an ambient temperature of -54 to +85 °C (-65 to +185 °F) (optionally available). The functionality of the explosion protection Ex ia is guaranteed for ambient temperatures to -50 °C (-58 °F) (optionally available). At temperatures ≤ -50 °C (-58 °F), explosion protection is guaranteed by the housing in the case of flameproof enclosure (Ex d) type of protection. The functionality of the transmitter cannot be

Electromagnetic compatibility (EMC)

• Electromagnetic compatibility as per EN 61326 series and NAMUR recommendation EMC (NE21)

• With regard to the safety function (SIL), the requirements of EN 61326-3-x are satisfied

Maximum deviation with interference influence: < 0.5% of span with full measuring range (TD 1:1)

For more details refer to the EU Declaration of Conformity.

Process

Process temperature range

NOTICE

The permitted process temperature depends on the process connection, the ambient temperature and the type of approval.

 All the temperature data in this document must be taken into consideration when selecting the device.

Devices without a manifold

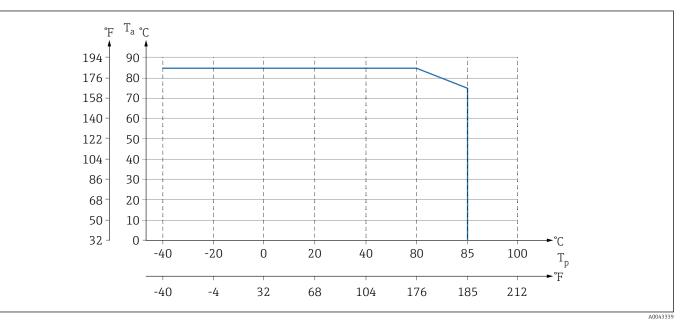

Image: A Values apply for vertical mounting without insulation.

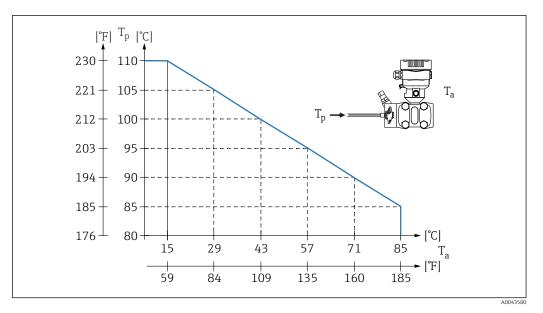

T_p Process temperature

T_a Ambient temperature

Devices with a manifold

The maximum permitted process temperature at the manifold is 110 °C (230 °F).

For process temperatures >85 $^{\circ}$ C (185 $^{\circ}$ F)C where non-insulated side flanges are installed horizontally on a manifold, a reduced ambient temperature applies (see the following graphic).

T_a Maximum ambient temperature at the manifold

T_p Maximum process temperature at the manifold

Oxygen applications (gaseous)

Oxygen and other gases can react explosively to oils, grease and plastics. The following precautions must be taken:

- All components of the system, such as measuring devices, must be cleaned in accordance with the national requirements.
- Depending on the materials used, a certain maximum temperature and a maximum pressure must not be exceeded with oxygen applications.

The cleaning of the device (not accessories) is offered as an optional service.

- p_{max}: 80 bar (1200 psi)
- T_{max}: 60 °C (140 °F)

FKM Cleaned of oil and grease	-10 to +85 °C (+14 to +185 °F)	-
FKM Cleaned for oxygen service	-10 to +60 °C (+14 to +140 °F)	-
FFKM	-10 to +85 °C (+14 to +185 °F)	MWP: 87 bar (1262 psi) OPL: 130 bar (1885 psi)
	+25 to +85 °C (+77 to +185 °F)	MWP: 107 bar (1552 psi) OPL: 160 bar (2 320 psi)
EPDM	-40 to +85 °C (-40 to +185 °F)	-
PTFE	-40 to +85 °C (-40 to +185 °F)	PN > 160 bar (2 320 psi) Minimum process temperature: -20 °C (-4 °F)
PTFE Cleaned for oxygen applications	-20 to +60 °C (-4 to +140 °F)	PN > 160 bar (2 320 psi) Minimum process temperature: -20 °C (-4 °F)

Process temperature range (temperature at transmitter)

Device without a manifold

■ -40 to +85 °C (-40 to +185 °F)

Lower temperatures are optionally available.

Pay attention to the process temperature range of the seal

	Device with a manifold		
	The maximum permitted process temperature at the manifold is 110 $^\circ$ C (230 $^\circ$ F) (restricted by IEC standard).		
	For process temperatures >85 °C (185 °F) where non-insulated side flanges are installed horizontally on a manifold, a reduced ambient temperature applies up to a maximum ambient temperature, calculated according to the following formula:		
	$T_{Ambient_Temperature_max} = 85 \text{ °C} - 2.8 \cdot (T_{Process_Temperature} - 85 \text{ °C})$		
	$T_{Ambient_Temperature_max} = 185 ^{\circ}\text{F} - 2.8 \cdot (T_{Process_Temperature} - 185 ^{\circ}\text{F})$		
	T _{Ambient_Temperature_max} = maximum ambient temperature in °C or °F		
	$T_{Process_Temperature} = process temperature at a manifold in °C or °F$		
Process pressure range	Pressure specifications		
	A WARNING		
	 The maximum pressure for the device depends on the lowest-rated component with regard to pressure (components are: process connection, optional mounted parts or accessories). Only operate the device within the specified limits for the components! MWP (maximum working pressure): The MWP is specified on the nameplate. This value is based on a reference temperature of +20 °C (+68 °F) and may be applied to the device for an unlimited period of time. Note temperature dependence of MWP. For flanges, refer to the following standards for the permitted pressure values at higher temperatures: EN 1092-1 (with regard to their stability/temperature property, the materials 1.4435 and 1.4404 are grouped together under EN 1092-1; the chemical composition of the two materials can be identical.), ASME B 16.5a, JIS B 2220 (the latest version of the standard applies in each case). MWP data that deviate from this are provided in the relevant sections of the Technical Information. The overpressure limit corresponds to the overpressure limit OPL of the entire device. This value refers to a reference temperature of +20 °C (+68 °F). The Pressure Equipment Directive (2014/68/EU) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP (maximum working pressure) of the device. In the case of sensor range and process connection combinations where the overpressure limit (OPL) of the process connection is smaller than the nominal value of the sensor, the device is set at the factory, at the very maximum, to the OPL value of the process connection. If the entire sensor range must be used, select a process connection with a higher OPL value (1.5 x PN; MWP = PN). Oxygen applications: do not exceed values for P_{max} and T_{max}. The sensors have been designed for high pressure ratings with load change. Check the zero point regularly in the event of very frequent load changes up to the nominal pressure 0 to 320 bar (0 to 4641 psi) and 30 mbar (0.45 psi) sensor		
	Burst pressure		
	PN160		
	 Measuring range: ≤40 bar (580 psi) Burst pressure: 690 bar (10 005 psi) Applies for the process seal materials FKM, PTFE, FFKM, EPDM and for pressure applied on both sides If the side vent valves (sv) option is selected and a PTFE seal is used, the burst pressure is 600 bar (8 700 psi) 		
	PN250, PN320, PN420 ■ Measuring range: ≤40 bar (580 psi) ■ Burst pressure: 1 320 bar (19 140 psi)		
	Applies for the process seal materials FKM, FFKM, EPDM and for pressure applied on both sides If the side vent valves (sv) option is selected, the burst pressure is 690 bar (10005 psi) For the process seal material PTFE (PN250), the burst pressure is 1250 bar (18125 psi)		
Ultrapure gas applications	Endress+Hauser also offers devices for special applications, such as for ultrapure gas, that are cleaned of oil and grease. No special restrictions regarding the process conditions apply to these devices.		

Hydrogen applications

A **gold-coated** metal process membrane offers universal protection against hydrogen diffusion, both in gas applications and in applications with water-based solutions.

Mechanical construction

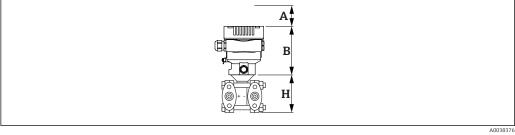

For the dimensions, see the Product Configurator: www.endress.com

Search for product \rightarrow Start configuration \rightarrow after configuration, click "CAD"

The following dimensions are rounded values. For this reason, the dimensions may deviate from the values on www.endress.com.

ign, dimensions	Device height
	The device height is calculated from • the height of the housing • the height of the individual process connection
	The individual heights of the components can be found in the following sections. To calculate the device height, add the individual heights of the components. Take the installation clearance into consideration (space that is used to install the device).

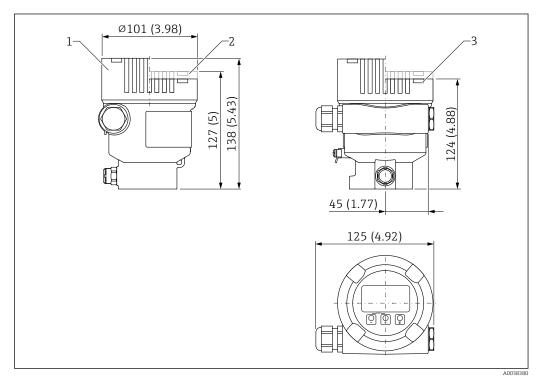

A Installation clearance

B Height of the housing

H Height of the sensor assembly

Dimensions

Single compartment housing

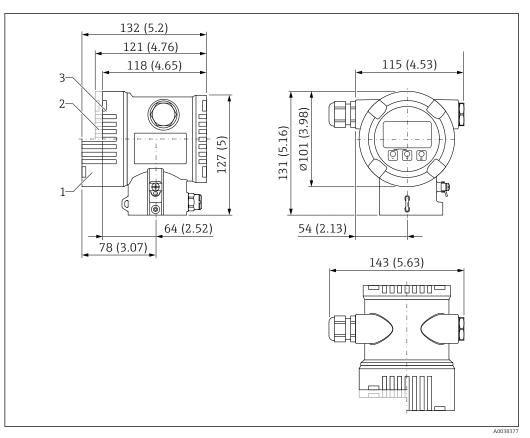

Unit of measurement mm (in)

•

- 1 Device with display, cover with glass viewing window (devices for Ex d, dust Ex): 138 mm (5.43 in)
- 2 Device with display, cover with plastic viewing window: 127 mm (5 in)
- 3 Device without display, cover without viewing window: 124 mm (4.88 in)

Cover optionally with ANSI Safety Red (color RAL3002) coating.

Dual compartment housing

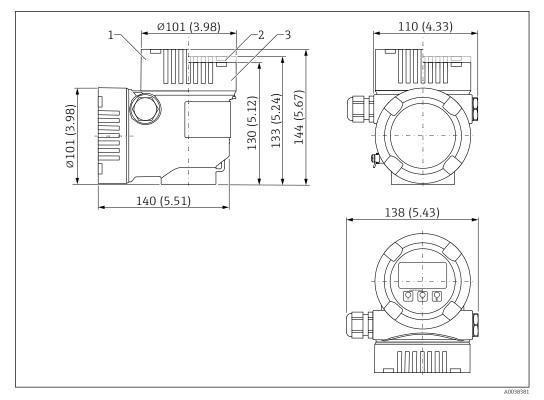

Unit of measurement mm (in)

- 1 Device with display, cover with glass viewing window (devices for Ex d, dust Ex): 132 mm (5.2 in)
- 2 Device with display, cover with plastic viewing window: 121 mm (4.76 in)
- 3 Device without display, cover without viewing window: 118 mm (4.65 in)

Cover optionally with ANSI Safety Red (color RAL3002) coating.

Dual compartment housing, L-form

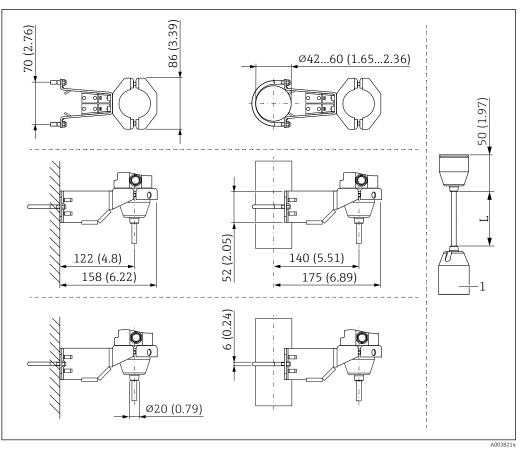

Unit of measurement mm (in)

1

- 1 144 mm (5.67 in) height with cover with glass viewing window (devices for Ex d, dust Ex)
- 2 133 mm (5.24 in) height with cover with plastic viewing window
- 3 Cover without viewing window

Cover optionally with ANSI Safety Red (color RAL3002) coating.

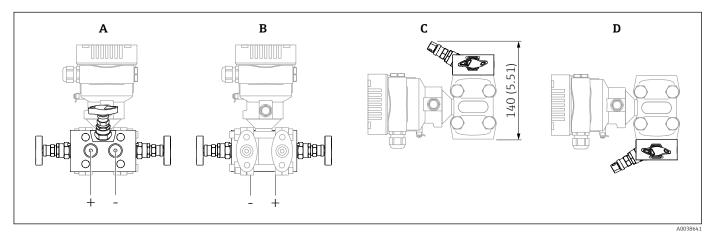

Sensor, remote (separate housing)

Unit of measurement mm (in)

- 1 81 mm (3.19 in)
- L Length of cable versions

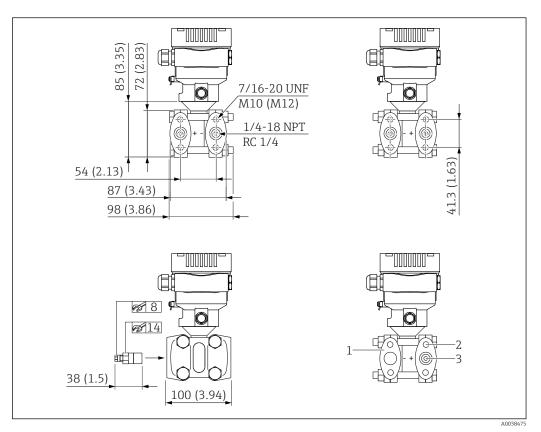

Mounted on manifold

Unit of measurement mm (in)

- A Mounted backside of manifold
- B Mounted frontside of manifold
- C Mounted bottom of manifold
- D Mounted top of manifold

Oval flange, connection 1/4-18 NPT or RC 1/4

☑ 5 Front view, left-hand side view, right-hand side view. Unit of measurement mm (in)

- 1 Blind flange
- 2 Thread depth: 15 mm (0.59 in)
- 3 Thread depth: 12 mm (0.47 in)(±1 mm (0.04 in))

7/16-20 UNF

Connections including 2 vent valves:

- <PN 160: 1/4-18 NPT IEC 61518
- PN 160: M10
- PN 420: M12

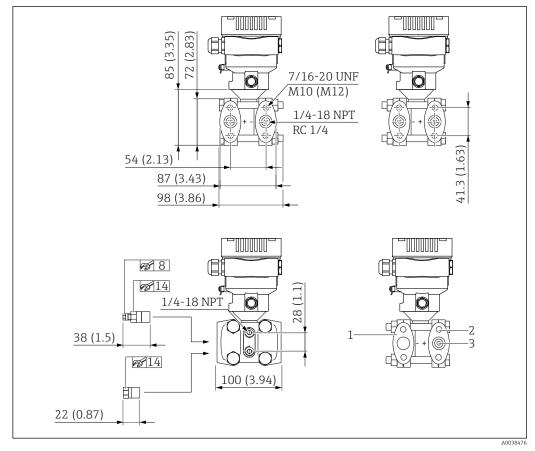

7/16-20 UNF with blind flange on LP side (version with absolute pressure sensor or gauge pressure sensor)

Connections including vent valve: 1/4-18 NPT IEC 61518

RC 1/4

Connections including 2 vent valves:

- <PN 160: 1/4-18 NPT IEC 61518</p>
- PN 160: RC 1/4
- PN 420: RC 1/4

Oval flange, connection 1/4-18 NPT or RC 1/4, with side vent

- In the second second
- 1 blind flange
- 2 Thread depth: 15 mm (0.59 in)
- 3 Thread depth: 12 mm (0.47 in)(±1 mm (0.04 in))

7/16-20 UNF

Connections including 4 locking screws and 2 vent valves: 1/4-18 NPT IEC 61518

7/16-20 UNF with blind flange on LP side (version with absolute pressure sensor or gauge pressure sensor)

Connections including vent valve: 1/4-18 NPT IEC 61518

RC 1/4

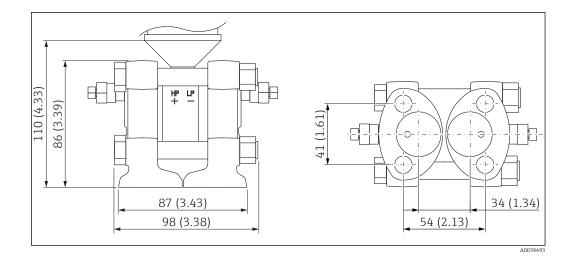

Connections including 4 locking screws and 2 vent valves:

- <PN 160: 1/4-18 NPT IEC 61518</p>
- PN 160: RC 1/4
- PN 420: RC 1/4

Bottom process connection NPT1/4-18 coplanar compatible

For mounting on existing coplanar manifolds.

Seal is supplied, as per selected seal material.

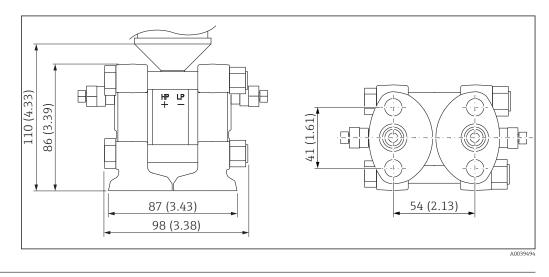

Seal of sensor flange	Seal of coplanar process connection ¹⁾
PTFE	PTFE
FKM	FKM
EPDM	
FFKM	

1) Flange manifold: cannot be selected!

Bottom process connection, NPT1/4-18 IEC61518 UNF7/16-20

For mounting on IEC manifolds in an upright position.

Weight

Housing

Weight including electronics and display.

- Single compartment housing: 1.1 kg (2.43 lb)
- Dual compartment housing
 - Aluminum: 1.4 kg (3.09 lb)
 - Stainless steel: 3.3 kg (7.28 lb)
- Dual compartment housing, L-form: 1.7 kg (3.75 lb)

Sensor, remote (separate housing) Housing: see the Housing section Housing adapter: 0.55 kg (1.21 lb) Process connection adapter: 0.36 kg (0.79 lb)) Cable: PE cable, 2 meters: 0.18 kg (0.40 lb) PE cable, 5 meters: 0.35 kg (0.77 lb) • PE cable, 10 meters: 0.64 kg (1.41 lb) • FEP cable, 5 meters: 0.62 kg (1.37 lb) Mounting bracket: 0.46 kg (1.01 lb) **Process connections** Process connections made of 316L: 3.2 kg (7.06 lb) Process connections made of Alloy C276: 3.5 kg (7.72 lb) NPT1/4-18 coplanar compatible, Super Duplex: 3.14 kg (6.92 lb) Ex d version: 0.63 kg (1.39 lb) Accessories Mounting bracket: 0.5 kg (1.10 lb) Materials in contact with Membrane material process 316L (1.4435) Alloy C276 The flange raised face is made from the same material as the process membrane Tantalum The flange raised face is made from the same material as the process membrane Monel (Alloy 400) The flange raised face is made from the same material as the process membrane Membrane coating Gold, 25 µm Seal PTFE FKM EPDM FFKM **Process connections** NPT1/4-18 IEC61518 UNF7/16-20 Side flange: AISI 316/316L (1.4408) / CF3M (cast equivalent to material AISI 316L) NPT1/4-18 IEC61518 UNF7/16-20, Super Duplex Side flange: 1.4410 NPT1/4-18 DIN19213 M10 Side flange: 316L or Alloy C276 (2.4819) NPT1/4-18 DIN19213 M12 Side flange: 316L RC 1/4 .

- Side flange: AISI 316/316L (1.4408) / CF3M (cast equivalent to material AISI 316L) or Alloy C276 (2.4819)
- NPT1/4-18 coplanar compatible, Super Duplex
- Side flange: 1.4469 (resistant to sea water, Super Duplex cast)
- NPT1/4-18 coplanar IEC
 - Side flange: 1.4469 (resistant to sea water, Super Duplex cast)
 - Measuring cell body: 316L (1.4404)
 - Screws: A4-70

Vent valves

Depending on process connection ordered:

- AISI 316L (1.4404)
- Alloy C22 (2.4602)

Locking screws

AISI 316L (1.4404), Alloy C22 (2.4602)

Accessories

For technical data (e.g. materials, dimensions or order numbers), see the accessory document SD01553P.

Materials not in contact with process

Single compartment housing and cover

Polyester powder coating on aluminum as per EN1706 AC43400 (reduced copper content ${\leq}0.1$ % to prevent corrosion)

Dual compartment housing and cover

- Polyester powder coating on aluminum as per EN1706 AC43400 (reduced copper content ≤0.1 % to prevent corrosion)
- Stainless steel (ASTM A351 : CF3M (cast equivalent to material AISI 316L) / DIN EN 10213 : 1.4409)

Dual compartment housing and cover, L-form

Polyester powder coating on aluminum as per EN1706 AC43400 (reduced copper content \leq 0.1 % to prevent corrosion)

Separate housing

- Mounting bracket
 - Bracket: AISI 316L (1.4404)
 - Screw and nuts: A4-70
 - Half-shells: AISI 316L (1.4404)
- Seal for cable from separate housing: EPDM
- Gland for cable of separate housing: AISI 316L (1.4404)
- PE cable for separate housing: abrasion-proof cable with strain-relief Dynema members; shielded using aluminum-coated foil; insulated with polyethylene (PE-LD), black; copper wires, twisted, UV-resistant
- FEP cable for separate housing: abrasion-proof cable; shielded using galvanized steel wire netting; insulated with fluorinated ethylene propylene (FEP), black; copper cores, twisted, UV-resistant
- Process connection adapter for separate housing: AISI 316L (1.4404)

Aluminum housing nameplate

- Adhesive polyester label
- Versions that can be ordered for use at reduced ambient temperatures: metal wired-on tag plate made of 316L (1.4404)

Nameplate of stainless steel housing

- Metal nameplate made of 316L (1.4404) Nameplate fasteners (rivets) made of 316Ti (1.4571)
- Versions that can be ordered for use at reduced ambient temperatures: metal wired-on tag plate made of 316L (1.4404)

Cable entries

- M20 gland: Plastic, brass nickel plated or 316L (depends on version ordered) Dummy plug made of plastic, aluminum or 316L (depends on version ordered)
 Thread M20: Dummy plug made of aluminum or 316L (depends on version ordered)
 Thread G1/2: Adapter made of aluminum or 316L (depends on version ordered)
- If the G1/2 thread is selected, the device is delivered with an M20 thread as standard and a G1/2 adapter is included with the delivery, along with the corresponding documentation

 Thread NPT1/2:
- Dummy plug made of aluminum or 316L (depends on version ordered)
- Plug M12:
 - CuZn nickel-plated or 316L (depends on version ordered)
- Dummy plug made of aluminum or 316L (depends on version ordered)
- Plug HAN7D: Aluminum, die-cast zinc, steel Dummy plug made of aluminum or 316L (depends on version ordered)

Fill fluid

- Silicone oil
- Synthetic oil, FDA
- Inert oil

Connecting parts

- Connection between housing and process connection: AISI 316L (1.4404)
- Screws and nuts
 - PN 160: hex.-headed bolt DIN 931-M12x90-A4-70
 - PN 160: hex.-headed nut DIN 934-M12-A4-70
 - PN 250, PN 320 and PN 420: hex.-headed bolt ISO 4014-M12x90-A4
 - PN 250, PN 320 and PN 420: hex.-headed nut ISO 4032-M12-A4-bs
- Measuring cell body: AISI 316L (1.4404)
- Setscrew: DIN 915 M 6x8 A2-70
- Bearing: DIN 5401 (1.3505)
- Side flanges: AISI 316/316L (1.4408) / CF3M (cast equivalent to material AISI 316L)

Accessories

For technical data (e.g. materials, dimensions or order numbers), see the accessory document SD01553P.

Operability

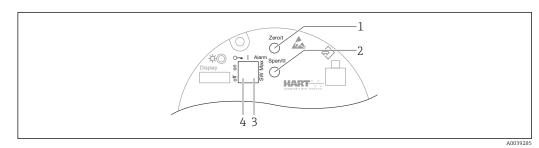

Operator-oriented menu structure for user-specific tasks User navigation Diagnostics Application System
 Fast and safe commissioning Interactive wizard with graphical user interface for guided commissioning in FieldCare, DeviceCare or DTM, AMS and PDM-based third-party tools or SmartBlue Menu guidance with short explanations of the individual parameter functions Standardized operation at the device and in the operating tools Access to the device via Web server
 Integrated HistoROM data memory Adoption of data configuration when electronics modules are replaced Up to 100 event messages recorded in the device
 Efficient diagnostic behavior increases measurement availability Remedial measures are integrated in plain text Diverse simulation options
 Bluetooth module (optionally integrated in local display) Quick and easy setup with SmartBlue app or PC with DeviceCare, version 1.07.00 and higher, or FieldXpert SMT70 No additional tools or adapters required Encrypted single point-to-point data transmission (tested by Fraunhofer Institute) and password-protected communication via <i>Bluetooth</i>[®] wireless technology
 Dperating languages English (English is set at the factory if no other language is ordered) Deutsch Français Español Italiano Nederlands Portuguesa Polski pyccKий язык (Russian) Türkçe 中文 (Chinese) 日本語 (Japanese) 한국어 (Korean) Bahasa Indonesia tiếng Việt (Vietnamese) čeština (Czech)

Svenska

Local operation

Operating keys and DIP switches on the electronic insert

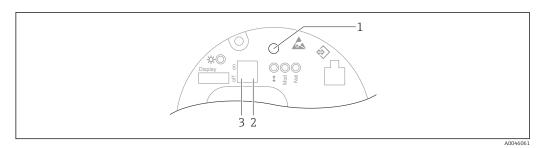

HART

- 1 Operating key for lower range value (Zero)
- 2 Operating key for upper range value (Span)
- 3 DIP switch for alarm current
- 4 DIP switch for locking and unlocking the device

The setting of the DIP switches has priority over the settings made via other operation methods (e.g. FieldCare/DeviceCare).

Ethernet-APL

- 1 Operating key for lower range value (Zero)
- 2 DIP switch for setting the service IP address
- 3 DIP switch for locking and unlocking the device

The setting of the DIP switches has priority over the settings made via other operation methods (e.g. FieldCare/DeviceCare).

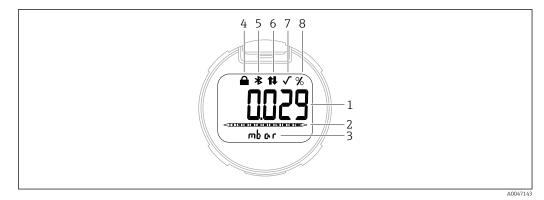

Local display

Device display (optional)

Functions:

- Display of measured values and fault and notice messages
- Background lighting, which switches from green to red in the event of an error
- The device display can be removed for easier operation

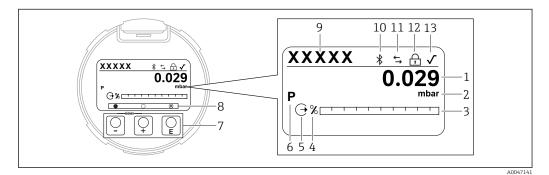

🖻 7 Segment display

- 1 Measured value
- 2 Bar graph proportional to the current output
- 3 Unit of measured value
- 4 Locked (symbol appears when the device is locked)
- 5 Bluetooth (symbol flashes if Bluetooth connection is active)
- 6 HART communication (symbol appears if HART communication is active), or APL communication (symbol appears if APL communication is active)
- 7 Square root extraction (appears if a square root extraction of the measured value is output)
- 8 Measured value output in %

The following graphics are examples. The display depends on the display settings.

1 8 *Graphic display with optical operating keys.*

- 1 Measured value
- 2 Unit of measured value
- 3 Bar graph proportional to the current output
- 4 Bar graph unit

9

- 5 Symbol for current output
- 6 Symbol for displayed measured value (e.g. p = pressure)
- 7 Optical operating keys
- 8 Symbols for key feedback. Different display symbols are possible: circle (not filled in) = key pressed briefly;
 - circle (filled in) = key pressed for longer; circle (with X) = no operation possible due to Bluetooth connection Device Tag
- 10 Bluetooth (symbol flashes if Bluetooth connection is active)
- 11 HART communication (symbol appears if HART communication is active), or APL communication (symbol appears if APL communication is active)
- 12 Locked (symbol appears when the device is locked)
- 13 Symbol for square root extraction

Remote operation Via H

Via HART protocol

Via Ethernet-APL PROFINET protocol

Via Web server

Via service interface (CDI)

With the Commubox FXA291, a CDI connection is established with the device interface and a Windows PC/notebook with a USB port.

	Operation via Bluetooth $^{ extsf{B}}$ wireless technology (optional)
	 Prerequisite Device with Bluetooth display Smartphone or tablet with Endress+Hauser SmartBlue app or PC with DeviceCare from version 1.07.00 or FieldXpert SMT70
	The connection has a range of up to 25 m (82 ft). The range can vary depending on environmental conditions such as attachments, walls or ceilings.
	The operating keys on the display are locked as soon as the device is connected via Bluetooth.
System integration	HART
	Version 7
	Ethernet-APL
	PROFINET Profile 4.0
Supported operating tools	Smartphone or tablet with Endress+Hauser SmartBlue (app), DeviceCare, version 1.07.00 and higher, FieldCare, DTM, AMS and PDM.
	PC with Web server via fieldbus protocol.
HistoROM	If the electronic insert is replaced, the stored data (except the event list) are transferred by unplugging the HistoROM module and plugging it into the new electronic insert. The device does not work without HistoROM.
	The device serial number is saved in the HistoROM. The electronics serial number is saved in the electronics.

Certificates and approvals

Certificates, approvals and other documentation that are currently available can be accessed on the Endress+Hauser website: www.endress.com \rightarrow Downloads.

CE mark The device meets the legal requirements of the relevant EC directives. Endress+Hauser confirms that the device has been successfully tested by applying the CE mark. **RCM-Tick marking** The supplied product or measuring system meets the ACMA (Australian Communications and Media Authority) requirements for network integrity, interoperability, performance characteristics as well as health and safety regulations. Here, especially the regulatory arrangements for electromagnetic compatibility are met. The products bear the RCM-Tick marking on the nameplate. ATEX Ex approvals CSA (in preparation) NEPSI (in preparation) INMETRO (in preparation) KC (in preparation) EAC (in preparation) JPN (in preparation) Also combinations of different approvals All the data related to explosion protection is provided in separate Ex documentation which is also available upon request. The Ex documentation is supplied as standard with all devices approved for use in explosion hazardous areas. Additional approvals in preparation. Explosion-protected smartphones and tablets If used in hazardous areas, mobile end devices with an Ex approval must be used. EAC conformity The device meets the legal requirements of the applicable EAC Directives. These are listed in the corresponding EAC Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the EAC mark. Drinking water approval NSF/ANSI 61 drinking water approval KTW drinking water approval W 270 Overfill protection (in The device is tested in accordance with the approval quidelines for overfill protection units (ZGpreparation) ÜS:2012-07) as overfill protection as per Section 63 of the German Water Resources Act (WHG). Functional safety SIL/ The devices with a 4-20 mA output signal have been developed according to the IEC 61508 IEC 61508 Declaration of standard. These devices can be used to monitor the process level and pressure up to SIL 3. For a detailed description of the safety functions, settings and functional safety data, see the "Functional Conformity (optional) Safety Manual". Marine approval (pending) ABS (American Bureau of Shipping) LR (Llovd's Register) BV (Bureau Veritas) DNV GL (Det Norske Veritas / Germanischer Lloyd) Radio approval Displays with Bluetooth LE have radio licenses according to CE and FCC. The relevant certification information and labels are provided on display. **CRN** approval A CRN approval (Canadian Registration Number) is available for some device versions. These devices are fitted with a separate plate bearing the registration number CRN 0F20813.5C. In order to obtain

	a CRN-approved device, a CRN-approved process connection must be ordered along with the option "CRN" in the order code for "Additional approvals".
Test reports	Test, certificate, declarations
	 Inspection certificate 3.1, EN10204 (material certificate, wetted metallic parts) NACE MR0175 / ISO 15156 (wetted metallic parts), declaration NACE MR0103 / ISO 17945 (wetted metallic parts), declaration AD 2000 (wetted metal parts), declaration, excluding process membrane ASME B31.3 process piping, declaration ASME B31.1 power piping, declaration Ambient temperature for transmitter (-50 to +85 °C (-58 to +185 °F)); for sensor, see specification Ambient temperature for transmitter (-54 to +85 °C (-65 to +185 °F)); for sensor, see specification Pressure test, internal procedure, test report Helium leak test, internal procedure, test report PMI test, internal procedure (wetted metallic parts), test report Welding documentation, wetted/pressurized seams, declaration
	Test reports, declarations and inspection certificates are provided electronically in the Device Viewer: enter the serial number of the nameplate (www.endress.com/deviceviewer).
	Applicable for the order codes "Calibration" and "Test, certificate" .
	Product documentation on paper
	Test reports, declarations and inspection certificates in hard copy can optionally be ordered with the order option "Product documentation on paper". These documents are supplied with the ordered product.
	Calibration
	5-point calibration certificate
	10-point calibration certificate, traceable to ISO/IEC 17025
	Manufacturer declarations
	A variety of manufacturer declarations can be downloaded from the Endress+Hauser website. Other manufacturer declarations can be ordered through the Endress+Hauser sales office.
	Downloading the Declaration of Conformity
	www.endress.com \rightarrow Download
Pressure Equipment	Pressure equipment with allowable pressure ≤ 200 bar (2900 psi)
Directive 2014/68/EU (PED)	Pressure equipment (maximum working pressure PS \leq 200 bar (2 900 psi)) can be classified as pressure accessories according to the Pressure Equipment Directive 2014/68/EU. If the maximum working pressure is \leq 200 bar (2 900 psi) and the pressurized volume of the pressure equipment is \leq 0.1 l, the pressure equipment is subject to the Pressure Equipment Directive (see Pressure Equipment Directive 2014/68/EU, Art.4, Point 3). The Pressure Equipment Directive only requires that the pressure equipment shall be designed and manufactured in accordance with the "sound engineering practice of a Member State".
	Reasons:
	 Pressure Equipment Directive (PED) 2014/68/EU Article 4, point 3 Pressure equipment directive 2014/68/EU, Commission's Working Group "Pressure", Guideline A-05 + A-06
	Note:
	A partial examination shall be performed for pressure instruments that are part of a safety instrumented system for the protection of a pipe or vessel from exceeding allowable limits (safety accessory in accordance with Pressure Equipment Directive 2014/68/EU, Article 2, point 4).

	Pressure equipment with allowable pressure > 200 bar (2 900 psi)
	Pressure equipment designated for application in every process fluid having a pressurized volume of <0.1 l and a max. allowable pressure PS > 200 bar (2900 psi) shall satisfy the essential safety requirements set out in Annex I of the Pressure Equipment Directive 2014/68/EU. According to Article 13 pressure equipment shall be classified by category in accordance with Annex II. Taking into account the low pressurized volume discussed above, the pressure devices are classed as category I pressure equipment. These devices must then bear the CE marking.
	Reasons:
	 Pressure Equipment Directive 2014/68/EU, Article 13, Annex II Pressure equipment directive 2014/68/EU, Commission's Working Group "Pressure", Guideline A-05
	Note:
	A partial examination shall be performed for pressure instruments that are part of a safety instrumented system for the protection of a pipe or vessel from exceeding allowable limits (safety accessory in accordance with Pressure Equipment Directive 2014/68/EU, Article 2, point 4).
	The following also applies:
	Devices, PN 420 Suitable for stable gases in group 1, category I, module A
Oxygen application	Verified cleaned, suitable for O2 service (wetted parts)
PWIS-free applications	Special cleaning of the transmitter to remove paint-wetting impairment substances, for use in paint shops, for instance.
China RoHS symbol	The device is visibly identified according to SJ/T 11363-2006 (China-RoHS).
RoHS	The measuring system complies with the substance restrictions of the Restriction on Hazardous Substances Directive 2011/65/EU (RoHS 2).
Certification PROFINET-APL	PROFINET interface
	 The device is certified and registered by the PNO (PROFIBUS Nutzerorganisation / PROFIBUS User Organization). The measuring system meets all the requirements of the following specifications: Certified according to: Test specification for PROFINET devices PROFINET Security Level - Netload Class
	 The device can also be operated with certified devices of other manufacturers (interoperability)
Additional certification	Classification of process sealing between electrical systems and (flammable or combustible) process liquids according to UL 122701 (previously ANSI/ISA 12.27.01)
	Endress+Hauser devices are designed according to UL 122701 (previously ANSI/ISA 12.27.01) and allow the user to waive the use of - and save the cost of installing - external secondary process seals in the conduit as required by the process sealing sections of ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These devices comply with the North-American installation practice and provide a very safe and cost-saving installation for pressurized applications with hazardous media. The devices are assigned to "single seal" as follows:
	CSA C/US IS, XP, NI:
	420 bar (6300 psi)
	Further information can be found in the control drawings of the relevant devices.
	Metrological accreditation
	With the order option "China", the device is supplied with a Chinese nameplate in accordance with the Chinese Quality Law.

Ordering information

Ordering information	Detailed ordering information is available from the nearest sales organization www.addresses.endress.com or in the Product Configurator under www.endress.com:
	1. Select the product using the filters and search field.
	2. Open the product page.
	The Configuration button opens the Product Configurator.
	 Product Configurator - the tool for individual product configuration Up-to-the-minute configuration data Depending on the device: direct input of information specific to the measuring point, such a the measuring range or operating language Automatic verification of exclusion criteria Automatic creation of the order code and its breakdown in PDF or Excel output format Ability to order directly in the Endress+Hauser Online Shop
Scope of delivery	The scope of delivery comprises: • Device • Optional accessories
	 Accompanying documentation: Brief Operating Instructions Final inspection report Additional Safety Instructions for devices with approvals (e.g. ATEX, IECEx, NEPSI, etc.) Optional: factory calibration form, test certificates
	The Operating Instructions are available on the Internet at: www.endress.com \rightarrow Download
Measuring point (tag)	 Order code: marking Option: Z1, tagging (TAG), see additional specification Location of tag identifier: to be selected in the additional specifications Tag plate, stainless steel Self-adhesive paper label Supplied plate RFID TAG RFID TAG + tag plate stainless steel RFID TAG + self-adhesive paper label RFID TAG + supplied label/plate Definition of tag name: to be defined in the additional specifications 3 lines, each containing up to maximum 18 characters The specified tag name appears on the selected label and/or the RFID TAG Identification on electronic nameplate (ENP): 32 digits
Test reports, declarations and inspection certificates	All test reports, declarations and inspection certificates are provided electronically in the <i>W@M Device Viewer</i> : Enter the serial number from the nameplate (www.endress.com/deviceviewer)
	Product documentation on paper Test reports, declarations and inspection certificates in hard copy can optionally be ordered with feature 570 "Service", Version I7 "Product documentation on paper". The documents are then provided with the device upon delivery.

Application packages

Heartbeat Technology

Availability

Available in all device versions.

Heartbeat Verification + Monitoring, optional.

Heartbeat Diagnostics

- Continuous self-monitoring of the device
- Diagnostic messages output to
 - the local display
 - an asset management system (e.g. FieldCare or DeviceCare)
 - an automation system (e.g. PLC)
 - Web server

Heartbeat Verification

- Device monitoring in installed state without interrupting the process, including report
- Clear measuring point assessment (pass/fail) with high total test coverage within the framework of the manufacturer's specifications
- Can be used to document normative requirements

Heartbeat Monitoring

- Statistical Sensor Diagnostics: statistical analysis and evaluation of the pressure signal, including signal noise, to detect process anomalies (e.g. blocked impulse lines)
- Loop Diagnostics: detection of elevated measuring circuit resistance values or declining power supply
- Process window: user-definable pressure and temperature limits to detect dynamic pressure surges or faulty trace heating systems or insulation
- Continuously supplies additional monitoring data to an external condition monitoring system for the purpose of predictive maintenance or process monitoring

Detailed description

See Special Documentation for SD Heartbeat Technology.

Device-specific accessories	Mechanical accessories
	 Mounting bracket for housing Mounting bracket for manifolds Manifolds: Manifolds can be ordered as an enclosed accessory (screws and seals for mounting are enclosed) Manifolds can be ordered as a mounted accessory (mounted manifolds are supplied with a documented leak test) Certificates (e.g. 3.1 material certificate and NACE) and tests (e.g. PMI and pressure test) that are ordered with the device apply for the transmitter and the manifold During the operating life of the valves, it may be necessary to re-tighten the pack Oval flange adapter Calibration adapter 5/16"-24 UNF, to screw into vent valves
	For technical data (e.g. materials, dimensions or order numbers), see the accessory document SD01553P.
	Plug connectors
	 Plug connector M12 90 deg, IP67 5m cable, union nut, Cu Sn/Ni Plug connector M12, IP67 union nut, Cu Sn/Ni Plug connector M12, 90 deg IP67 union nut, Cu Sn/Ni
	The IP protection classes are only maintained if the dummy cap is used or the cable is connected.
	Weld-in accessory
	For details, refer to TI00426F/00/EN "Weld-in adapters, process adapters and flanges".
Device Viewer	All the spare parts for the device, along with the order code, are listed in the Device Viewer

Accessories

Supplementary documentation

For an overview of the scope of the associated Technical Documentation, refer to the following: • Device Viewer (www.endress.com/deviceviewer): enter the serial number from the nameplate

• *Endress+Hauser Operations App*: enter the serial number from the nameplate or scan the 2D matrix code (QR code) on the nameplate

Standard documentation	 Technical Information: planning guide The document contains all the technical data on the douise and provides on eventions of the 	
	The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device	
	 Brief Operating Instructions: takes you quickly to the 1st measured value 	
	 Brief Operating instructions, takes you quickly to the 1st measured value The Brief Operating Instructions contain all the essential information from incoming acceptance t initial commissioning Operating Instructions: reference manual 	
	The Operating Instructions contain all the information that is required in the various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting connection, operation and commissioning through to troubleshooting, maintenance and disposal	
Supplementary device- dependent documentation	Additional documents are supplied depending on the device version ordered: Always comply stric with the instructions in the supplementary documentation. The supplementary documentation is integral part of the device documentation.	
Field of Activities	Document FA00004P	
	Pressure measurement, powerful devices for process pressure, differential pressure, level and flow	
Special Documentation	Document SD01553P	
	Mechanical accessories for pressure equipment	
	The documentation provides an overview of available manifolds, oval flange adapters, pressure	

The documentation provides an overview of available manifolds, oval flange adapters, pressure gauge valves, shutoff valves, water pocket pipes, condensate pots, cable shortening kits, test adapters, flushing rings, Block&Bleed valves and protective roofs.
